1.0 PURPOSE

The purpose of this Manual is to summarise the elements of the Environmental Management System (EMS) for QatarEnergy Idd El-Shargi operations.

Information necessary to identify the elements of the system making up EMS are available in this document. The Environmental Management Manual (EMM) should be used as a roadmap for locating the individual elements of the QatarEnergy-IS EMS, which is integrated into its existing Management Systems.

2.0 SCOPE AND APPLICABILITY

This procedure applies to all QatarEnergy-IS facilities onshore and offshore (Idd El-Shargi North Dome (ISND), Idd El-Shargi South Dome (ISSD), Idd El-Shargi Halul operations and Idd El-Shargi Mud plant & Ras Laffan facilities, henceforth referred to as QatarEnergy-IS. This manual will be revised as changes in the EMS are deemed necessary and will otherwise be reviewed for completeness every 3 years.

3.0 ROLES AND RESPONSIBILITIES

3.1 ASSET MANAGER

- a) Ensure that QatarEnergy-IS complies with its HSSEQ Policy Statement by providing appropriate resources for developing, implementing, achieving, reviewing and maintaining the Policy.
- b) Ensure that the organisational structure, planning, responsibilities, practices, procedures and processes of QatarEnergy-IS follow the principles of Continuous Improvement.

3.2 HSE MANAGER

- a) Ensuring that the EMS requirements are established, implemented and maintained in accordance with the international standard ISO 14001.
- b) Reporting on the performance of the EMS to the Asset Manager for review and as a basis for Continual Improvement of the EMS.

3.3 LEADERSHIP TEAM

- a) Implement, communicate and enforce the HSSEQ Policy Statement and evaluate the effectiveness of HSE programs.
- b) Develop and encourage employee and contractor participation and involvement in HSE programs and assign subordinates specific responsibilities and accountabilities with respect to managing HSE issues and for implementing HSE programs, systems and standards.

3.4 QatarEnergy EMPLOYEES AND CONTRACTORS

- a) Comply with both the content and spirit of the HSSEQ Policy Statement.
- b) Instruct their subordinates on the content and implement the HSE Policy in the workplace,

	QatarEnergy-IS ENVIRONMENT MANAGEMENT MANUAL DOC. NO. IS-HSE-MAN-029 REV. 01
--	---

- c) Report any workplace hazard, risk or concerns to their supervisor.

3.5 SPECIFIC RESPONSIBILITIES

Responsibilities are given below as related to the individual elements of ISO 14001:2015.

Clause	ISO 14001:2015 Requirements	Responsible Party
5	Leadership	
5.1	Leadership and Commitment	Leadership Team
5.2	Environmental Policy	Leadership Team
5.3	Organizational roles, responsibilities and authorities	Leadership Team
6	Planning	
6.1.2	Environmental Aspects	HSE
6.1.3	Compliance obligations	HSE
6.1.4	Planning Action	HSE
6.2.1	Environmental Objectives	Leadership Team
6.2.2	Planning actions to achieve environmental objectives	Leadership Team
7	Support	
7.1	Resources	Leadership Team
7.2	Competence	Leadership Team
7.3	Awareness	Leadership Team
7.4.2	Internal Communication	HSE
7.4.3	External Communication	HSE
7.5.3	Control of documented information	HSE
8	Operation	
8.1	Operational Planning and Control	All
8.2	Emergency Preparedness and response	All
9	Performance Evaluation	
9.1.2	Evaluation of Compliance	HSE / FOPS
9.2.2	Internal Audit Program	HSE
9.3	Management Review	Leadership Team
10	Improvement	
10.2	Nonconformity and corrective action	HSE
10.3	Continual Improvement	All

4.0 PROCEDURAL STEPS

4.1 DESCRIPTION OF QatarEnergy-IS ACTIVITIES

Idd El Shargi is a strategic operation of QatarEnergy within its Operations Directorate. Idd El Shargi North Dome (ISND) and Idd El Shargi South Dome (ISSD) are the two major oil fields operated by QatarEnergy Idd El-Shargi Operations. Idd El-Shargi production station PS1 is located 85 km east of Doha in approximately 100 ft of water. The station consists of a number of oil process, gas process, utilities, water injection and accommodation jackets interconnected by bridges. Supplying the production station with oil and gas from the ISND and

ISSD fields are series of tripod wellhead jackets, manifold gathering stations, eight-slot and nine-slot wellhead platforms. The PS1 facility has eleven platforms interconnected by bridges. Crude oil is pumped from PS1 to the Halul Island for separation of produced water from crude oil.

ISSD is located at about 24 km South of ISND. ISSD is a remote unmanned facility with oil and gas production wells, water injection wells and water supply wells. The fluid is transferred to the PS1 facility from the ISSD production wells for processing. Halul Island is approximately 22 km North of ISND. PWHF at Halul Island has two large separation tanks where produced water and oil are separated. Produced water is pumped through a filtration package for disposal offshore into Umm Er Radhuma formation. At Halul island there is a small flare for tank operations and a diesel generator. Also, there is an operator station equipped with communication module in the local equipment room.

IS Ras Laffan facilities include Warehouse, Drilling yard and Mud plant. The mud plant and drilling yard are operated by UD, but the MME Consent to Operate (CTO) is maintained by QatarEnergy-IS.

4.2 OVERVIEW OF QatarEnergy-IS EMS

QatarEnergy-IS is committed to the principle of Continuous Improvement. This is embodied in the QatarEnergy HSSEQ Policy.

The Leadership Team is committed to continuous performance improvement in the areas of Health, Safety, and Environmental. We will strive to continually improve our HSE performance through a culture of individual commitment and responsibility, supported by our Management System and sound work practices.

QatarEnergy-IS is committed to sustainable development, conserving resources and setting HSE goals based on minimizing or eliminating adverse HSE effects and risks associated with QatarEnergy-IS services and operations.

The following table draws a comparison between the requirements of ISO 14001:2015 and QatarEnergy-IS Health, Safety and Environmental Management System (HSEMS) as embodied in Health, Safety and Environmental Management System procedure (IS-HSE-PRC-021). Note that HSEMS is an Integrated Health, Safety and Environmental Management System while ISO 14001:2015 specifies Environmental Management Systems, as detailed in the following table:

	QatarEnergy-IS ENVIRONMENT MANAGEMENT MANUAL DOC. NO. IS-HSE-MAN-029 REV. 01

10.3 Continual Improvement	IS-HSE-PRC-021- Leadership and Commitment IS-HSE-PRC-021- Policy and Strategic Objectives IS-HSE-PRC-021-Auditing and Reviewing

4.3 SIGNIFICANT ENVIRONMENTAL ASPECTS AND IMPACTS

Procedure for determining Environmental Aspects and Impacts (IS-HSE-PRC-028) is used to determine, score and rank the environmental effects of QatarEnergy-IS operations in order of the most significant environmental effects. The results are recorded in the Register of Environmental Aspects and Impacts (IS-HSE-REG-002) which is maintained and updated in accordance with the procedure.

This procedure applies to all QatarEnergy-IS operations, both onshore and offshore. Where relevant, the following aspects have been considered:

- I. Emissions to atmosphere
- II. Releases to water
- III. Waste production and disposal
- IV. Contamination of land
- V. Use of raw materials and other natural resources

- VI. Other local environmental and community issues, e.g., noise, odour, dust and visual impact.

This procedure has been applied to normal operating conditions, abnormal operating conditions (e.g., start-up and shutdown) and emergency (potential) conditions.

4.4 LEGISLATIVE REQUIREMENTS

The Register of HSE Legislation (IS-HSE-REG-001) contains an index of environmental legislation which is applicable to QatarEnergy-IS operations and the Consent To Operate (CTO) permits.

4.5 OBJECTIVES AND TARGETS

The Index of Environmental Legislation and significant effects from the Environmental Aspects and Impacts Register are used to develop QatarEnergy-IS Environmental Objectives and Targets, which are recorded in Register (IS-HSE-REG-003)

Factors considered in preparing IS-HSE-REG-003 are Best Available Techniques financial impact, operational and business requirements, and the impacts to and interests of stakeholders.

4.6 ENVIRONMENTAL MANAGEMENT PROGRAMME

To assure the effectiveness of the EMS, QatarEnergy-IS has considered specific programs for each objective and target, including target dates and responsible personnel. In order to accomplish objectives and targets, the Leadership Team will provide appropriate resources such as time, budget, and manpower. Progress towards meeting objectives and targets is monitored by assignment of action items and deadlines in Action Tracking System.

This programme shall be amended for any new developments and new or modified activities, products or services, as necessary.

4.7 STRUCTURE AND RESPONSIBILITIES

Operation Manager has overall responsibility for the operations, with the support of the Leadership Team.

The HSE Manager oversees implementation of the HSSEQ Policy and otherwise ensures that proper consideration is taken for HSE matters within the scope of all operations.

The HSE Manager is responsible for all routine operations within the field, which includes environmental monitoring, segregation and disposal of waste and response to environmental incidents. The Facilities Engineering and Construction (FEC) Manager is responsible for new projects and is therefore concerned with designing processes to appropriate environmental standards and obtaining the relevant environmental permits.

The Environmental Team is part of the HSE Team and acts as an advisor specifically on environmental matters.

4.8 TRAINING, AWARENESS AND COMPETENCE

General Environmental Awareness training is provided to all employees. The training package advises employees on the significant environmental aspects and impacts of operations. Selected personnel are trained as ISO 14001 Auditors for the purpose of conducting internal assessments against this standard.

Training has been defined for both onshore and offshore workers in the HSE Training Matrix (ref IS-HSE-PRC-002). Specific training modules are also required for personnel involved in specific roles such as emergency response. Training is assigned and tracked by the HSE Department using the online training database. Competency requirements are compiled based on individual job descriptions. The training program provides training based on the required competency for each job.

The contractors are contractually required to provide HSE information, confirming that appropriate HSE training has been conducted for the jobs their employees are performing.

4.9 COMMUNICATIONS

4.9.1 Internal Communications

The QatarEnergy Connect portal is accessible by all employees, contains HSE information that is published from time to time. This information includes Environmental Alerts, which are developed after incidents have occurred either internally or externally that identify a learning opportunity or feature general information on environmental issues.

Environmental issues and achievements, including incident statistics, are presented in periodic HSE meetings.

In addition, HSE Manager issue Monthly Management Review minutes to all personnel on HSE issues. This letter consists of messages relevant to health, safety or environmental topics which impact the business.

Changes to existing operations are communicated and controlled via procedures, standing instructions, operating manuals, platform directives and by the Management of Change (MOC) process.

Actions to be taken in an emergency are communicated according to written emergency procedures. Many emergency procedures include execution of pre-planned drills to ensure that appropriate personnel will perform properly during actual emergencies.

The requirements and use of communications systems offshore are described in written procedures.

4.9.2 External Communications

Information required by QatarEnergy-IS or the Ministry of Municipality and Environment (MME) will be reported regularly or provided on request as required, for example in accordance with the conditions in the Consent to Operate.

HSE related communications received from external interested parties will be passed to the HSE Department, who will document and respond to this communication. The HSE Policy is available externally on request.

4.10 EMS DOCUMENTATION

This EMM summarises the core elements of the EMS and should be used as a roadmap for providing direction to the elements of the EMS within existing management systems and determining their interaction with each other.

This manual will be revised as changes are deemed necessary and will be reviewed for completeness on a 3-year cycle.

4.11 DOCUMENT CONTROL

The EMS procedures are kept electronically QatarEnergy Connect and shared K-drive. QatarEnergy employees can assess the documents posted on QatarEnergy Connect.

4.12 OPERATIONAL CONTROL

The activities, products and services have been assessed for associated environmental aspects and impacts, as determined by IS-HSE-PRC-028 and recorded IS-HSE-REG-002. Suitable operational controls have been established for all operations requiring controls. These include hard controls (physical or structural controls) and soft controls (procedural controls, whether documented or not).

Documented procedures are PS-1 Operating Manual (IS-FOP-PRC-104) and Halul Operating Manual (IS-FOP-PRC-106). Maintenance activities are planned and managed using the computerised maintenance management system (SAP). For new projects, any changes required to the SAP records are identified and implemented as per the Facilities Engineering department's forms and procedures. Relevant procedures are communicated to suppliers and contractors as part of purchasing system.

4.13 EMERGENCY PREPAREDNESS AND RESPONSE

QatarEnergy-IS has procedures for responding to emergency situations and for preventing and mitigating the environmental impacts that may be associated with them. Safety and helicopter emergencies are dealt with via A7S (Alpha 7 Sierra)

QatarEnergy-IS maintains procedures detailed in point 8.2 of the table in section 4.2 of this procedure.

The emergency preparedness and response procedures are tested at least annually in either tabletop exercises or full participation drills. The procedures may be revised after a drill or in the event of lessons learnt from an accident or emergency situation. The Halul Produced Water Handling Facility (PWHF) and Ras Laffan Warehouse also participate as per Halul Terminal and RLIC Emergency Drill respectively, as required

4.14 MONITORING AND MEASUREMENT

Environmental emissions measured are, as a minimum, those required to be reported by the Consent to Operate (CTO) conditions decreed by the Ministry of Municipality and Environment.

Results are recorded in internal filing systems and are requested at the end of the reporting period (as specified by the CTO) for compilation and the identification of trends.

The actions to be taken if results do not comply with permitted settings are given in the CTO conditions.

Monitoring equipment is calibrated and maintained as per the periods specified in QatarEnergy SAP system.

4.15 RECORDS

HSE records include results of regulatory monitoring, audits, reviews and training records. Examples of records include the following:

Record	Maintained By	Location
IS-HSE-REG-001 Register of Applicable Legislation	HSE Department	Shared Drive (K).
IS-HSE-REG-002 Environmental Aspects and Impact Register	HSE Department	Shared Drive (K)
IS-HSE-REG-003 - Environmental Objectives & Targets		
Training Database	HSE Department	Learning management System

The retention time for each record is as per the Records Retention Schedule. Paper records that have exceeded their retention time and are to be disposed of shall be shredded before disposal in either the recycled paper bins or as general trash. Electronic records shall be permanently removed from the server.

4.16 EMS AUDITS

Elements of HSEMS are reviewed through HSE Internal Assessments/Audits. Preparation for QatarEnergy-IS HSEMS audits take into account:

- An understanding of QatarEnergy-IS activities.
- Familiarity with HSEMS.
- Consideration of previous audit findings.

The Environmental Management Programme will be audited against the elements of ISO 14001:2015 whenever an HSE Internal Assessment/ Audit is performed.

Findings are communicated to the Leadership Team in an Audit Report and are compiled for consideration in the annual HSE Management Review. Outstanding actions resulting from findings are tracked by the HSE Department.

4.17 MANAGEMENT REVIEW

The Executive VP, Operations conducts Management Review at every six months of critical HSE issues, systems, goals and strategies in line with HSEMS, to ensure its

continuing suitability, adequacy and effectiveness. The Management review includes:

- Results from audits
- The extent to which objectives and targets have been met.
- Concerns among stakeholders.

Observations, conclusions and recommendations from the Management Review are documented and circulated to all the concerned. Changes to policy, objectives and other elements of the EMS required to maintain the commitment to Continuous Improvement are identified and incorporated in a timely manner in the 5-year business plan.
